Description:

The **VS Series** sanitary cleanroom clogs were developed for use in hygienically sensitive and controlled environments and are fully washable and autoclavable.

The shape of the anatomically designed and self-massaging clog caresses the feet and allows a comfortable fit.

The grained sole has been designed to offer stability even on slippery or loose surfaces.

The lateral perforation allow feet to breathe and the height of the sole prevents contact with liquids or unhealthy substances.

The VS Series clogs comply with all the relevant rules and are certified CE n. 0161/10467/05 del23.09.2005 and UNI EN 347 – UNI EN 344. A removable inner antibacterial sole offers comfort and an antistatic insert is integrated in the heel to allow direct contact to the ground.

Characteristics:

- fully autoclavable and hygienic clogs
- Robust material, resistant to disinfectants
- available with adjustable heel strap
- Antistatic heel
- Optional: antibacterial removable sole
- Available in 9 different colors
